

Glyph · Python development pilot

2.59M parameters · 4,096-token vocabularies · seed 42 · identical 128-byte evaluation blocks

Equal raw text + shared context

Equal packed-token budget

● Corpus-fit □ Mismatched prose ---- Full-training unigram (arm color)

50 validation files · 43 repository families · 273,747 bytes. One training seed; no seed-uncertainty bands.

Early development result, not a final test conclusion. Baselines use the full training split; gains are descriptive.
